**Automatic multipoint locking systems with day latch function**

**Description**

Our automatic locks **autosafe 833** and **autosafe 833SP** are offered with day latch function as an optional version.

The automatic latching deadbolts can be deactivated via a faceplate mounted slider. This enables the use of a mechanical or electrical door opener as with standard multipoint locks.

**Function**

**Activation of the day latch**

- Press the lever handle to the limit stop and hold on.
- Slide the day latch switch to the limit stop.
- Release the lever handle.  
The latching deadbolts now stay retracted; the main latch is still in function.

**Deactivation of the day latch**

- Bring the day latch switch back into the starting position.  
The latching deadbolts are now again in function.
